# 1 Introduction

## 1.1 Background

In 2009, the Statewide Interoperability Executive Committee (SIEC) undertook efforts to create a standard for operational and technical parameters for use of the 700 MHz public safety band. These efforts included the adoption of a Standard Channel Nomenclature and development of a prioritized list of interoperable channels. As the SIEC and their Technical and Operational Workgroup evaluated options for the creation of the Standard, the scope of work was expanded to include VHF, UHF and 800 MHz public safety bands as well. Concurrently, the National Public Safety Telecommunications Council (NPSTC) and the Association of Public-Safety Communications Officials (APCO) were establishing national standards in channel naming conventions resulting in ANSI Standard (ANS 1.194.1-2010). These channel naming conventions were incorporated into the Department of Homeland Security Office of Emergency Communications (DHS-OEC) National Interoperability Field Operations Guide (NIFOG). As these standards developed, they were also incorporated into Arizona's plan. The first Interoperable Channel Priority Program Guide was approved by the SIEC on October 19, 2010, with the Arizona Interoperable Channels Plan being approved by the SIEC on February 15, 2011.

## 1.2 Purpose

The purpose of this Plan is to establish requirements and/or recommendations for programming of statewide interoperable channels into subscriber units and to provide guidance on the use of the interoperable channels during day-to-day and emergency use. This Plan is intended to identify and prioritize interoperable channels and to establish consistent naming conventions. It is not intended to cover the operational procedures for use and monitoring.

## 1.3 Scope

This document provides SIEC requirements and recommendations for the VHF, UHF and 700 MHz interoperability spectrum.<sup>1</sup> Administration of the interoperable portion of the 800 MHz spectrum is the responsibility of the 800 MHz NPSPAC Arizona Regional Review Committee. Therefore, while 800 MHz interoperability information is included for purposes of providing a complete reference, 800 MHz users are referred to the Arizona 800 MHz Regional Plan (Region 3 PR Docket 91-143) for requirements and recommendations regarding that spectrum band.

---

<sup>1</sup> APCO/NENA General Meeting Minutes from December 9, 2005 and Arizona Statewide Interoperability Committee Meeting Minutes from January 24, 2006 mutually confirm the transfer of coordination for the VHF and UHF bands from APCO to the SIEC and SIEC acceptance of coordination planning for the interoperability channels in the VHF, UHF and 700 MHz bands.

## 1.4 Definitions

- AIRS: Arizona Interagency Radio System, formerly referred to as the Interagency Radio System (IARS) or as the Arizona Emergency Radio System (AERS).
- Bandwidth: The difference between the upper and lower frequencies in a continuous set of frequencies. It is typically measured in hertz.
- CTCSS: Continuous Tone-Coded Squelch System is a circuit that is used to reduce the annoyance of listening to other users on a shared two-way radio communications channel. It is sometimes called tone squelch. Where more than one user group is on the same channel (called *co-channel users*), CTCSS mutes the other users if they are using a different CTCSS tone or no CTCSS.
- DPS: Department of Public Safety
- EMS: Emergency Medical Services
- FCC: Federal Communications Commission
- Hz: Hertz, the unit of frequency in the International System of Units. It is defined as the number of cycles per second of a periodic phenomenon.
- kHz: Kilohertz, one thousand Hertz
- MHz: Megahertz, one million Hertz
- NIFOG: National Interoperability Field Operations Guide
- NGO: Non-governmental Organization
- NPSTC: National Public Safety Telecommunications Council
- POC: Point of Contact
- Project 25 (P25 or APCO-25): A suite of standards for digital radio communications for use by federal, state/province and local public safety agencies in North America to enable them to communicate with other agencies and mutual aid response teams in emergencies.
- Rx: Receiving
- SIEC: The Statewide Interoperability Executive Committee (SIEC or Committee) is a stakeholder driven committee that advances interoperable communications in Arizona by providing guidance on technical and operational communication interoperability matters. The SIEC manages the interoperability portions of the 700 MHz, UHF and VHF spectrums, and has operational oversight of AIRS.
- SOP: Standard Operating Procedure
- Trunked radio system: a complex type of computer-controlled two-way radio system that allows sharing of relatively few radio frequency channels among a large group of users.

## Arizona Interoperable Channels Plan and Priority Programming Guide

- Tx: Transmitting
- UHF: Ultra High Frequency
- VHF: Very High Frequency
- WSB: Arizona Department of Public Safety, Wireless Systems Bureau which licenses the frequencies used by the AIRS system and has engineering and maintenance responsibility for AIRS.

### 1.5 References

This document refers to the listing of the FCC allocations for the narrowband interoperability spectrum and related programming requirements, available online at:

<http://www.apcointl.com/new/commcenter911/documents/APCO-NPSTC-ANS1-104-1web.pdf>

This document refers to APCO/NPSTC ANS 1.104.1-2010, available online at:

[http://www.apcointl.org/component/docman/doc\\_download/137-standard-channel-nomenclature-for-the-public-safety-interoperability-channels.html](http://www.apcointl.org/component/docman/doc_download/137-standard-channel-nomenclature-for-the-public-safety-interoperability-channels.html)

### 1.6 Administration

The SIEC is responsible for administering this procedure.

### 1.7 Document Terminology

The terms “shall,” “must,” “will,” and “required” are used throughout this document to indicate required parameters and to differentiate from recommended parameters. Recommendations are identified by the words “should,” “desirable” and “preferably.”

### 1.8 Updates & Revisions

This document will be reviewed annually and updated as needed. Those wishing to suggest revisions or additions to this document should send their feedback to the SWIC, electronically to [swic@azdps.gov](mailto:swic@azdps.gov).

Revisions to this document will be reviewed by the Technical and Operational Workgroup, which will recommend appropriate changes to the SIEC. The SIEC must then approve all such changes. Revised versions of this document will be effective once approved by the SIEC.

If no revisions are required, the “last reviewed” date will be updated, and no other changes will be made.

## **2 Subscriber Programming**

### **2.1 Channels**

Every portable and mobile radio in Arizona should include the following channels that are within the same band of operation as the basic radio:

- All of the national interoperable channels. These channels, where possible, should be programmed in a distinctly identified area (i.e. zone, bank, deck) of each radio.
- All of the statewide channels belonging to the Arizona Interagency Radio System (AIRS). See the AIRS Standard Operating Procedures (SOP) for programming information.
- Any other statewide interoperability channels established for the radio's band of operation.

Due to space limitations in some radios, it may not be possible to program all the interoperable channels into all radios. In that case, consult the Interoperable Channel Plan for each frequency band as listed in Appendix A to find the channels prioritized for use in Arizona. Those channels are to be programmed into the radios with the highest priority first, continuing as space permits.

## 2.2 Nomenclature

Standard nomenclature<sup>2</sup> will be used in Arizona and channel displays will be in accordance with that nomenclature. Since simplex channels have different nomenclature than repeated channels, both must be programmed, in lieu of utilizing a Direct or Talk around Button. The channel tables provide the standard eight-character nomenclature to be used.<sup>3</sup>

The standardized format for channel names specifies a maximum length of eight characters. The first character is a spectrum band designator (i.e. L, V, U, 7 or 8). The next three or four characters signify the primary purpose of operations on the channel (i.e. CALL, DATA, FIRE, GTAC, LAW, MED, MOB, TAC or TRVL). The next one or two characters provide a unique channel identifier. Finally, a single character may be used to identify a modification to the default operation type on the channel/channel pair (i.e. “D” for direct or talk around use in simplex operations).

## 2.3 Common Language Protocol

To provide interoperability among first responder agencies at the local, state and national level, only plain English language shall be used when communicating on any interoperability talkgroup or channel. In order to avoid confusion or misunderstanding, 10-codes, incident codes or signals are not to be used on these talkgroups or channels.

## 2.4 FCC Allocations and related Programming Requirements

The listing of the FCC allocations for the narrowband interoperability spectrum and related programming requirements can be found on the Association of Public-Safety Communications Officials – International website at:

<http://www.apcointl.com/new/commcenter911/documents/APCO-NPSTC-ANS1-104-1web.pdf>

## 2.5 Licensing Requirements

The FCC designated national interoperability channels require no separate FCC license for mobile equipment. Mobile Relay (FB2) and Fixed Stations (FB) require FCC licensing.

---

<sup>2</sup> APCO/NPSTC ANS 1.104.1-2010: Nomenclature for the Public Safety Interoperability Channels was approved by the American National Standards Institute (ANSI) on June 9, 2010 and provides a standardized naming format for each Federal Communications Commission (FCC) and National Telecommunications and Information Administration (NTIA) designated Interoperability Channel in the Public Safety and Federal government Radio Services.

<sup>3</sup> In the case where radios cannot, for technical reasons, support eight character names, a six character name may be used by deleting the first band character and limiting the primary purpose designator to three characters (i.e. CAL, DAT, FIR, and GTC). The six character name may only be used in equipment that is not capable of implementing eight character names.

## 2.6 Calling Channels

Calling channels are used to contact other users in the region for the purpose of requesting incident-related information and assistance, and for setting up tactical communications for specific events. In most cases, the calling party will be asked to move from the calling channel to one of the tactical channels for continuing incident operations or other interoperability communication needs.

## 2.7 Tactical Channels

All Interoperability channels, except as specifically described by frequency band below, shall be used for conventional-only operation. Normally, users will call a communication/command center on one of the calling channels and be assigned an available tactical channel. By FCC rules, the tactical channels are to be used for coordination activity between different agencies in a mutual aid situation. Incidents requiring multi-agency participation will be coordinated over these channels by the agency controlling the incident. In the event of conflict between multiple activities, prioritized use shall occur according to the following levels:

1. Disasters, large scale incidents, or extreme emergencies requiring mutual aid or interagency communications.
2. Incidents where imminent danger exists to life or property.
3. Other incidents requiring the response of multiple agencies.
4. Pre-planned events requiring mutual aid or interagency communications.
5. Incidents involving a single agency where supplemental communications are needed for short term agency use.
6. Drills, tests and exercises.

In the event of multiple simultaneous incidents within the same priority level, interoperability channels should be allocated with the following priorities in mind:

1. Incidents with the greatest level of exigency (e.g., greater threat to life or property, more immediate need) have priority over less exigent incidents.
2. Agencies with single/limited interoperable options have priority use of those options over agencies with multiple interoperable options.
3. When at all possible, agencies already using an interoperable asset during an event should not be redirected to another resource.

In noninterference instances, tactical channels may be used on a case-by-case basis for emergency activities of a single agency.

### 3 National VHF Interoperability Channels/Frequencies

The VHF simplex tactical (TAC) channels are narrowband (12.5 kHz) by definition. Default operation should be carrier squelch receive, CTCSS 156.7(5.A) transmit.

**Table 1: Non-Federal VHF National Interoperability Channels**

Description	Name	Rx Freq MHz	Rx CTCSS Hz	Tx Freq MHz	Tx CTCSS Hz
Calling	VCALL10	155.7525	CSQ	155.7525 base/mobile	CTCSS 156.7 (5A)
Tactical	VTAC11	151.1375	CSQ	151.1375 base/mobile	CTCSS 156.7 (5A)
Tactical	VTAC12	154.4525	CSQ	154.4525 base/mobile	CTCSS 156.7 (5A)
Tactical	VTAC13	158.7375	CSQ	158.7375 base/mobile	CTCSS 156.7 (5A)
Tactical	VTAC14	159.4725	CSQ	159.4725 base/mobile	CTCSS 156.7 (5A)

### 4 National UHF Interoperability Channels/Frequencies

The UHF simplex tactical (TAC) channels will be narrowband (12.5 kHz) by definition, effective 01/01/2013. Default operation should be carrier squelch receive, CTCSS 156.7(5A) transmit.

**Table 2: Non-Federal UHF National Interoperability Repeater Channels**

Description	NAME	RX FREQ MHz	RX CTCSS Hz	TX FREQ MHz
Calling	UCALL40	453.2125	CSQ	458.2125

### 5 FCC 700 MHz Public Safety Band

## Arizona Interoperable Channels Plan and Priority Programming Guide

The narrowband (12.5 kHz) voice and data interoperability channels are defined on a nationwide basis. There are two Calling channel sets and 30 Tactical channel sets. Channel sets are comprised of two 6.25 kHz channels each.

### **5.1 700 MHz Calling Channels**

Users should first attempt to call in simplex mode. Use 7CALL50D as the primary calling channel and 7CALL70D as the secondary calling channel. Users should next attempt to call in repeater mode, using 7CALL50 first and then 7CALL70. In addition to the usual calling channel functions, the calling channels may be used to notify users when a priority is declared on one or more of the tactical interoperability channels.

### **5.2 Monitoring**

700 MHz licensees will be responsible for monitoring interoperable calling channels according to operational guidelines established by the SIEC for this function.

### **5.3 Operations**

Use the ANSI/TIA 102 Standards (i.e., Project 25 digital protocols) as the Digital Interoperability Standard for the conventional-only mode of operation on the narrowband voice & data interoperability channels<sup>4</sup>. The standard Network Access Code (NAC) \$293 should be used for all digital operations on FCC-designated Interoperability Channels where digital modulation is permitted or required. Mobile relay (repeater) stations that are part of a local, regional, or statewide interoperability network may be programmed with a NAC code of F7E to allow the repeater receiver to unmute.

### **5.4 Encryption**

Use of encryption is prohibited on calling channels and permitted on all other interoperability channels. Use of encryption on interoperability channels is generally not recommended.

### **5.5 Deployable Systems**

General Public Safety Services Channels labeled 7TAC51 through 7TAC54 and 7TAC71 through 7TAC74 shall be made available for deployable equipment used during disasters and other emergency events that place a heavy, unplanned burden upon in-place radio systems. The SIEC shall consider the need for both "deployable trunked" and "deployable conventional" systems and make those channels available to all entities in Arizona. Agencies responsible for

---

<sup>4</sup> Voice and Data Interoperability standards were decided in the 4th R&O in Docket 96-86 and can be found in Part 90 of the Code of Federal Regulations (CFR). Voice I/O standard documents are listed in 90.548(a)(i); data I/O standard documents are listed in 90.548(a)(ii).

## Arizona Interoperable Channels Plan and Priority Programming Guide

deployable interoperability resources are encouraged to develop and facilitate the signing of a Memorandum of Understanding (MOU) with each of their interoperability partners for the use of the equipment. These MOUs will allow their interoperability partners to preprogram subscriber equipment and otherwise train and prepare to use the resource during exercises, planned events and incidents.

### 5.6 Trunking on the Interoperability Channels

Trunking the Interoperability channels on a secondary basis shall be limited to operation on eight specific 12.5 kHz channel sets, divided into two subsets of four 12.5 kHz channels. One subset is defined by 7TAC51 through 7TAC54 and the other by 7TAC71 through 7TAC74. In Arizona, the following six channel sets are recommended for use:

12.5 kHz Channel Pair	Name	12.5 kHz Channel Pair	Name
23/24	7TAC51	263/264	7TAC54
103/104	7TAC52	817/818*	7TAC73*
183/184	7TAC53	897/898	7TAC74

\*Subject to restrictions on the border with Mexico

The City of Mesa Police Department has requested and been approved by the SIEC for the use of the six channel sets for a 700 MHz mobile trunked system with cache radios to be utilized as an interoperable UASI asset.

**Table 3: MESA PD 700 MHz Portable Trunked Channel Plan**

	NAME	BANDWIDTH	RX FREQ MHz	RX NAC	TX FREQ MHz	TX NAC

9	7TAC73	12.5 kHz	774.10625	3966 or \$F7E	804.10625	659 or \$293
10	7TAC73D	12.5 kHz	774.10625	3966 or \$F7E	774.10625	659 or \$293
11	7TAC74	12.5 kHz	774.60625	3966 or \$F7E	804.60625	659 or \$293
12	7TAC74D	12.5 kHz	774.60625	3966 or \$F7E	774.60625	659 or \$293

## 6 Minimum Programming Guide

Since the 700 MHz band is new, equipment is expected to have the capacity to include all of the interoperability channels. In addition, all 700 MHz subscriber radios could be equipped to operate on all of the NPSPAC 800 MHz conventional mutual aid channels in analog mode per the 800 MHz channel table provided.

The table below recommends minimum programming requirements for those few 700 MHz radios with space limitations.

**Table 4: Minimum 700 MHz Programming Guide for Radios with Space Limitations**

RECEIVE CHANNEL	TRANSMIT CHANNEL	BASE, MOBILE, OR FIXED (REPEATER OR CONTROL)	ELIGIBILITY /PRIMARY USE	COMMON NAME	LIMITATIONS (47 CFR Part 9)

\*Subject to restrictions on the border with Mexico

## 7 FCC 800 MHz National Interoperability Channels

The 800 MHz National Interoperability Channels have a bandwidth of 20 kHz. Default operation should be carrier squelch receive, CTCSS 156.7(5A) transmit. The calling channel, 8CALL90, is the national calling channel with a designated national CTCSS tone. 8CALL90D is it's corresponding direct or talk around channel name. The remaining channels are tactical channels.

Arizona Interoperable Channels Plan and Priority Programming Guide

---

<sup>5</sup> See the Region 3 800 MHz Plan section Communications Requirements – Regional Interoperability for details regarding the use of these channels.

## APPENDIX A

### Arizona Statewide Interoperable Channel Plan - Priority Programming Guides

The Statewide Interoperability Executive Committee (SIEC) has approved these “priority programming guides” to standardize and increase interoperable communications throughout the state in the VHF, UHF, 700 and 800 MHz bands. It is suggested each agency incorporate these channels into their channel plan the next time their radios are programmed.

#### VHF

12	VTAC12	12.5 kHz	154.4525	CSQ	154.4525	156.7
13	VTAC13	12.5 kHz	158.7375	CSQ	158.7375	156.7
14	VTAC14	12.5 kHz	159.4725	CSQ	159.4725	156.7
15	VTAC36*	12.5 kHz	151.1375	CSQ	159.4725	136.5
16	VTAC37*	12.5 kHz	154.4525	CSQ	158.7375	136.5

\*NOTE: The use of tactical repeater pairs VTAC36/37 will supersede the use of VTAC11-14 since their Rx/Tx frequencies will be in use. In other words;

- VTAC36 uses the Rx of VTAC11 and the Tx of VTAC14 with a 8.335 MHz separation.
- VTAC37 uses the Rx of VTAC12 and the Tx of VTAC13 with a 4.285 MHz separation.

NOTE: VTAC33 and VTAC34 were replaced by VTAC36 and VTAC37 on January 11, 2012

NOTE: VSAR16 was formally STATE SAR or SAR NFM

Radios capable of being programmed in analog, digital or mixed modes should use mixed mode for receive, where possible.

16						

Radios capable of being programmed in analog, digital or mixed modes should use mixed mode for receive, where possible.

## Arizona Interoperable Channels Plan and Priority Programming Guide

### 800 MHz

The regional AIRS channels, AIRS1 through AIRS5, have CTCSS tones only used in Arizona. The 8TAC91 through 8TAC94 channels are also national channels. Optionally, the channel name can be modified when used in the direct or talk around mode with the addition of “D” to the end of the channel name (for example, 8TAC92D).

**Table 8: Statewide 800 MHz Priority Programming Guide**

	<b>NAME</b>	<b>BAND-WIDTH</b>	<b>RX FREQ MHz</b>	<b>RX CTCSS Hz</b>	<b>TX FREQ MHz</b>	<b>TX CTCSS Hz</b>
1	8AIRS1	20 kHz	851.0125	CSQ	806.0125	141.3

15	8AZTAC5†	20 kHz	851.0375	CSQ	806.0375	156.7
16	8AZTAC5D†	20 kHz	851.0375	CSQ	851.0375	156.7

† See: Restrictions on the use of 8AZTAC5 and 8AZTAC5D

Radios capable of being programmed in analog, digital or mixed modes should use mixed mode for receive, where possible.

### Restrictions on the use of 8AZTAC5 and 8AZTAC5D

The use of 8AZTAC5 and 8AZTAC5D are unique to Arizona with the approval of the Region 3 - 800 MHz Regional Planning Committee. The names of 8TAC95 and 8TAC95D were changed to 8AZTAC5 and 8AZTAC5D on January 11, 2012. These frequencies were also previously called 8TAC5 and 8TAC5D.

The 8AZTAC5 channel must be licensed. License to the 8AZTAC5D channel is provided under the same 8AZTAC5 license.

The Arizona 800 MHz Regional Plan states that all interoperability channel licensees for Mobile Relay (FB2), or Fixed Stations (FB) shall be obtained by and in the name of the entity authorized by the Arizona Regional Review Committee. Other base radios shall be licensed in the name of

## Arizona Interoperable Channels Plan and Priority Programming Guide

the applicant agency. In accordance with FCC Report and Order General Docket 87-112, vehicular, portable, and aircraft stations using either the five National channels or the Statewide interoperability channel frequencies may operate without further FCC authorization. However, the prospective vehicular/portable/aircraft user must comply with 4.5.4 of this section. (See the Arizona Regional Review Committee's (ARRC), Arizona 800 MHz Regional Plan – Section 4.4: Application Procedures.)

The Arizona 800 MHz Regional Plan also states that use of these two frequencies is prohibited in some areas in the Counties bordering California; however, it shall be included in all portable/mobile equipment in all other areas. Use of these two frequencies in La Paz and Mohave Counties is subject to interference from a State of California transmitter located near Needles, California and use is prohibited within a 70 mile radius of the transmitter located at 34° 40' 54"N, 114° 41' 24"W. (See the Arizona Regional Review Committee's (ARRC), Arizona 800 MHz Regional Plan – Section 4.5.2.1: Monitoring Requirements.)

16	7CALL70D	12.5 kHz	773.25625	3966 or \$F7E	773.25625	659 or \$293

Radios capable of being programmed in analog, digital or mixed modes should use mixed mode for receive, where possible.

**Federal Interoperability Incident Response (IR) and Law Enforcement (LE) Tables 10-13**

The authorization and usage of the Federal IR and LE channels are outlined by Memorandum of Understanding (MOU) between the U.S. Department of Interior and the Arizona Department of Public Safety. The intent of the MOU is to provide for interoperable frequencies between Federal and State, Tribal, County or Local agencies. FCC Licenses for usage within The State of Arizona have been granted and are on file with the DPS Wireless Systems Bureau. The Federal IR and LE channels are not to be used for any routine or administrative uses as defined by the National Telecommunications and Information Administration (NTIA). Frequency coordination or deconfliction shall be done through the Statewide Interoperability Coordinator (SWIC) or designee.

Agencies within Arizona are encouraged to program Federal IR and LE channels since they offer expansive interoperability when the need to communicate with various levels of the Federal Government is present.

**VHF Incident Response (IR) Federal Interoperability Channels**

**Table 10: Arizona Licensed VHF IR Federal Interoperability Channels**

<b>Assignment</b>	<b>NAME</b>	<b>Note</b>	<b>Mobile RX</b>	<b>Mobil TX</b>
Incident Calling	NC1	Calling	169.53750	164.71250
Incident Command	IR1		170.01250	165.25000
Medical Evacuation Control	IR2		170.41250	165.96250
Logistics Control	IR3		170.68750	166.57500
Interagency Convoy	IR4		173.03750	167.32500
Incident Calling Direct	IR5	Direct for NC1	169.53750	169.53750
Incident Command Direct	IR6	Direct for IR1	170.01250	170.01250
Medical Evacuation Control Direct	IR7	Direct for IR2	170.41250	170.41250
